<b>Per Year</b>	
Exam Fee	Rs. 3000
Tuition Fee per year	Rs. 45000

## Pharm.D

Doctor of Pharmacy (Pharm.D) is a six-year professional doctoral programme approved by the Government of India and regulated by the Pharmacy Council of India (PCI). The programme comprises five years of academic study followed by one year of compulsory internship in a hospital setting, with a strong emphasis on clinical pharmacy and patient-centered care. Pharm.D equips students with advanced knowledge and skills to function as integral members of the healthcare team, focusing on rational drug therapy, medication safety, and improved patient outcomes. The programme also addresses critical healthcare needs in India such as irrational drug use, medication errors, and non-compliance in chronic diseases.

### Course Outcomes:

On completion of the Pharm.D programme, graduates will be able to apply clinical and therapeutic knowledge in patient care, promote rational and safe use of medicines, identify and resolve drug-related problems, understand ethical and legal aspects of pharmacy practice, and effectively collaborate with physicians and other healthcare professionals. They will also develop strong communication, clinical decision-making, and professional skills required for hospital and community pharmacy practice.

### Scope of Pharm.D:

Pharm.D graduates have wide career opportunities in hospital and clinical pharmacy, community pharmacy, drug information services, pharmacovigilance, clinical research, medical writing, regulatory affairs, and academia. They can work as clinical pharmacists, hospital pharmacists, drug safety associates, medical advisors, and healthcare consultants in hospitals, pharmaceutical companies, and research organizations in India and abroad. The programme also offers pathways for higher studies, research, and global career prospects in advanced clinical pharmacy practice.

## B.Pharm

Bachelor of Pharmacy (B.Pharm) is a four-year undergraduate professional programme that provides comprehensive knowledge of pharmaceutical sciences and prepares students for diverse roles in the healthcare and pharmaceutical sectors. The course covers key areas such as Human Anatomy, Physiology, Pharmaceutics, Pharmaceutical engineering, Medicinal chemistry, Pharmacology, and Pharmaceutical analysis, enabling students to understand the development, manufacture, quality control, and safe use of medicines. B.Pharm is a highly job-oriented and better choice among science students, offering strong career prospects in both public and private sectors.

### Course Outcomes:

After completing the B.Pharm program, graduates will be able to apply scientific principles in drug formulation and development, ensure quality and safety of pharmaceutical products, understand regulatory and ethical aspects of pharmacy practice, and effectively participate in healthcare delivery. Students also develop analytical, technical, and professional skills required for industrial, clinical, and research-based roles.

### Scope of B.Pharm:

B.Pharm graduates can pursue careers as pharmacists, production and quality control executives, medical representatives, drug inspectors, regulatory affairs officers, and research associates in pharmaceutical companies, hospitals, and healthcare organizations. They may also opt for higher studies such as M.Pharm, Pharm.D, MBA, or research programmes, and opening pathways to academia, research, and leadership roles. With the continuous growth of the pharmaceutical and healthcare industries, B.Pharm remains an evergreen and rewarding career option.

## D.Pharm

The Diploma in Pharmacy (D.Pharm) is a short-term professional course that provides fundamental knowledge and practical training in pharmaceutical sciences. It prepares students for roles in community and hospital pharmacy, the pharmaceutical industry, and drug store management, while also serving as a foundation for higher studies such as B.Pharm and Pharm.D.
